

Valves

& SOLUTIONS

Engineered to Control the Flow

INTRODUCTION

SHIELD is a company created to cater to the infrastructure, fire protection and building services industries with a comprehensive range of products designed to be competitive and of assured quality.

We stay ahead of today's evolving market requirements by committing to a program of continued research and development.

We are able to maintain our high standards by ensuring that our worldwide manufacturing networks are the most advanced in the industry in Europe, Asia and America in terms of quality and delivery lead time. Our fully experienced and professional staff is there to provide engineering expertise and after sales service exactly when you need it.

Combine this with highly responsive and customer focused network of distribution centres around the world, you will find that customer satisfaction is what we excel at.

We are justifiably proud of our global client base. With offices and facilities in the UK and Middle East, we are able to comprehend the specific needs of your particular region.

SHIELD VALVES

& SOLUTIONS

Bronze Gate Valve

SD-GGV20/W

The SD-GGV20/W gate valve is manufactured to BS 5154 which can be used for heating plants, sanitary systems, plumbing services, waterworks, pneumatic systems and steam.

Technical Details:

Working Pressure	PN20
Working Temperature	-10°C ~ 170°C
Thread	BS 21 (B.S.P.T.)

Specifications:

No.	Part	Material
1	Hand-wheel Nut	Brass
2	Name Plate	Aluminium
3	Hand-wheel	Aluminium
4	Stem	DZR Brass
5	Packing Nut	Brass
6	Ring	Brass
7	Packing	PTFE
8	Stem Bush	DZR Brass
9	Bonnet	Bronze
10	Disc	Bronze
11	Body	Bronze

Bronze Gate Valve NRS

50	92	156	75	50

NOTE: Dimensions are in mm

Brass Gate Valve

SD-9102

The SD-9102 gate valve manufactured as per international standards. It can be used for heating plants, sanitary systems, plumbing services & waterworks.

Technical Details:

Working Pressure	PN16
Working Temperature	-5°C ~ 85°C
Thread	BS 21 (B.S.P.T.)

Specifications:

No.	Part	Material
1	Hand Wheel Nut	Steel
2	Name Plate	Aluminium
3	Hand-wheel	Cast Iron
4	Stem	Brass
5	Packing Nut	Brass
6	Gland	Brass
7	Packing	PTFE
8	Bonnet	Brass

Bronze Rising Stem Gate Valve

SD-GGV20 RS

The SD-GGV20 RS gate valve is manufactured to BS 5154 which can be used for heating plants, sanitary systems, plumbing services, waterworks, pneumatic systems and steam.

Technical Details:

Working Pressure	PN20
Working Temperature	-10°C ~ 170°C
Thread	BS 21 (B.S.P.T.)

Specifications:

No.	Part	Material
1	Nut	Brass
2	Name Plate	Aluminium
3	Hand-wheel	Aluminium

Bronze Lock Shield Gate Valve

SD-970 BSL

The SD-970 BSL gate valve is manufactured to BS 5154 which can be used for heating plants, sanitary systems, plumbing services, waterworks, pneumatic systems and steam. Lock shield gate valve used to restrict unauthorised adjustments.

Technical Details:

Working Pressure	PN20
Working Temperature	-10°C ~ 170°C
Thread	BS 21 (B.S.P.T.)

Specifications:

No.	Part	Material
1	Lock-shield	Brass
2	Stem	DZR Brass
3	Clamping Ring	Brass
4	Packing	PTFE
5	Stem Bush	DZR Brass
6	Bonnet	Bronze

Gate Valve

Non-Rising Stem

SD-NRS16

The SD-NRS16 gate valve is manufactured to BS 5163 which can be used for isolation the section of pipe work and equipment in HVAC applications and general commercial applications. The valve has a non-rising stem and operated by hand wheel.

Technical Details:

Working Pressure	PN16
Working Temperature	-10°C ~ 120°C
Flange & Drilling	BS EN 1092-2 PN16

Specifications:

No.	Part	Material
1	Body	Ductile Iron
2	Resilient Wedge Disc	Ductile Iron + EPDM
3	Stem	Stainless Steel
4	Bolt	Stainless Steel 316
5	Bonnet	Ductile Iron

- PN25 rated valves are also available upon request.
- Available in all iron upon request.
- Available in AWWA upon request.

OS & Y Gate Valve

Rising Stem

SD-OS&Y

The SD-OS&Y gate valve is manufactured to BS 5163 which can be used for isolation the section of a pipe and equipment in HVAC application and general/commercial applications.

Gate Valve with outside yoke and rising stem gives a class indication of valve status as a distance and designed with safety and quality in every detail.

Technical Details:

Working Pressure	PN16
Working Temperature	-10°C ~ 100°C
Flange & Drilling	BS EN 1092-2 PN16

Specifications:

- PN25 rated valves are also available upon request.
- Available in all Iron upon request.
- Available in ANSI/AWWA standards upon request.

Bronze Ball Valve

SD-GBV25/W

The SD-GBV25/W Ball valve is manufactured to BS 5750 and ideal for potable water, commercial and industrial applications. These ball valves features a blow-out proof stem as well as a full port design which ensures minimal pressure drop.

Technical Details:

Working Pressure	PN20, PN25
Working Temperature	-20°C ~ 170°C
Thread	BS 21 (B.S.P.T.)

Specifications:

No.	Part	Material
1	Seat Retainer	Bronze
2	Gasket	PTFE

- Extended Stem shall be supplied upon request.

Wafer Butterfly Valve

Lever Operated

SD-BVL125

The SD-BVL125 butterfly valve is designed in accordance with BS EN 593. A quarter turn rotary motion wafer style valve that is used to stop, regulate and start to flow with less pressure loss. Applicable for water supply, drainage and HVAC application.

Technical Details:

Working Pressure	PN16
Working Temperature	-10°C ~ 100°C
Flange & Drilling	BS EN 1092-2 PN16
Top Flange	ISO 5211

Specifications:

Double Flanged Butterfly Valve

Gear Operated

SD-16BVDF

The SD-16BVDF Butterfly Valve can be used for throttling or regulating flow as well as in a fully open and closed position. Concentric Butterfly Valve stem is centered in the middle of the disc and disc centered in the bore.

Technical Details:

Working Pressure	PN16
Working Temperature	-5°C ~ +85°C

- PN25 rated valves are also available upon request.

Innovative & Ultra Compact Fan Coil Unit Valve Package

SHIELD provides fan coil unit valve package for maximum convenience and easy accessibility.

NOTE: Please contact us for more information.

Fan Coil Unit Valve Package

SD-VP/9717

Fan coil unit valve package is an innovative and ultra compact valve arrangement that minimize the time and space required to connect the system terminal to distribution pipe.

Valve package is a pre-assembled factory tested valve arrangement which gather in a unique item. All the components needed for terminal end unit such as strainer, bypass valve, balancing valve and draincock no need of assembly on site.

Specifications:

No.	Part	Material
1	Coupling	DZR Brass
2	Gasket	PTFE
3	Handle (RED)	Aluminium
4	Ball Valve	DZR Brass
5	Nut	DZR Brass
6	Female Nipple	DZR Brass
7	Handle (BLACK)	Aluminium
8	Connection Piece	DZR Brass
9	Test Points	DZR Brass
10	Ball Valve	DZR Brass
11	Handle (BLUE)	Aluminium
12	Strainer	DZR Brass
13	Bush	DZR Brass

Technical Details:

Working Pressure	PN25
Working Temperature	-10°C ~ 100°C
Thread	ISO 7 & ISO 228

BENEFITS:

- ▶ Compact design and easy installation and removal.
- ▶ Easy access to the isolation valves, strainers & drain plug PN25 rated.
- ▶ Reduced heat loss.
- ▶ Insulation cover: Expanded polypropylene material (EPP).

Fixed Orifice Double Regulating Valve

SD-9951

WRAS
Water Regulations Advisory Scheme

The SD-9951 is designed in accordance with BS 7350. Fixed orifice double regulating valve offers an accuracy of $\pm 5\%$ on all settings for precise flow regulation. These are Y-pattern globe valves with characterised throttling disc tending towards equal percentage performance.

Fixed orifice double regulating feature allows valve opening to be set with an allen key. The operation of the valve is by using of microset hand wheel.

Technical Details:

Working Pressure	PN25
Working Temperature	-10°C ~ 120°C

Fixed Orifice Balancing Valve

SD-9746

Balancing valves SD 9746 perfectly combine with a regulating valve and flow measuring device all in one-piece body. This solution, thanks to its particular fixed orifice type measurement system, provides high accuracy flow balancing across all valve settings with an error margin within $\pm 5\%$ of the gauged value.

BENEFITS:

- Interception, measurements and regulation
- Integrated metering station
- Early reading of the preset by graduated scale
- Shutter with linear profile
- Preset mechanical memory
- Compact valve body

Technical Details:

Variable Orifice Balancing Valve

SD-9787

WRAS
Water Regulations Advisory Scheme

SD 9787 variable orifice balancing valves are suitable for both heating (LPHW) and cooling applications at working pressures up to 25 bar.

The main features of SD 9787 balancing valves are as follows:

- ▶ A thread locking mechanism so that valve settings can be accurately locked enabling the valve to be closed and re-opened to its exact pre-set position.
- ▶ Allen key locking of valve positions.
- ▶ A valve position indicator scale which can be read from any angle.
- ▶ An EPDM lined valve plug providing tight shut-off for isolation purposes.

BENEFITS:

- ▶ Interception, measurements and regulation
- ▶ Early reading of the preset by graduated scale
- ▶ Shutter with linear profile
- ▶ Preset mechanical memory

Technical Details:

Working Pressure	PN 25
Working Temperature	-10°C ~ 120°C

2 Way Combination Valve/Pre-Setting

SD-9788NC/NO/PRO

SD 9788 balancing valves are suitable for both heating and cooling applications.

The main features of SD-9788NC pre-setting regulating valve are as follow:

- ▶ Screw driver adjustable pre-setting.
- ▶ 11 positions flow pre-setting.
- ▶ Plastic cap enabling the valve to be closed and opened to pre-setted KV value.
- ▶ Designed to be upgraded with thermoelectric actuator (SD 9788-NC, NO, PRO).
- ▶ 0-10V Proportional actuator available up on request.
- ▶ An EPDM lined valve plug providing tight shut-off for isolation purposes. Pressure Class: PN25. Temperature: $-10^{\circ}\text{C} \div 120^{\circ}\text{C}$.

Technical Details:

Pressure Independent Control Balancing Valve

SD-9777

SD-9777 balancing valve is designed for the automatic balancing of heating and cooling systems, regardless of fluctuating pressure conditions of the system.

Thanks to its unique design, SD-9777 balancing valve is able to perform three functions:

- ▶ REGULATION
Selection of required flow rate;
- ▶ CONTROL
Constant flow rate independent of pressure fluctuations;
- ▶ MODULATION
"Full authority" flow rate modulation.

Technical Details:

Working Pressure	PN25
Working Temperature	0°C ~ 120°C
Differential pressure	4 bar
High Flow	244 l/h ~ 8586 l/h
Low Flow	78 l/h ~ 1700 l/h

Specifications:

Pressure Independent Control Balancing Valve

The main features of SD-9777 are the following:

- ▶ Easy required flow rate selection using presetting dial;
- ▶ Automatic balancing in the event of fluctuating pressure conditions in system branches;
- ▶ Full modulation regardless of the presetting (flow rate setting)
- ▶ Flexibility if the system is modified after the first installation;
- ▶ Reduction of balancing costs, improved energy saving and high environmental comfort;
- ▶ Easy flushing procedure thanks to quick and simple removal of differential pressure control cartridge placed inside valve body;
- ▶ Reduced installation dimensions thanks to compact valve construction, which does not require inlet and outlet straight pipelines to stabilize the flow.

ELECTRIC ACTUATORS

- ▶ Their main features are the following:
- ▶ Maximum stroke: 5,5 mm;
- ▶ 3 positions or 0.10Vdc control signal;
- ▶ Swivel nut easy assembling;
- ▶ Manual operation by 3 mm hexagonal key;
- ▶ Short circuit resistance;
- ▶ Protection against polarity reversal.

ELECTRIC ACTUATORS DN15 ÷ DN32

- ▶ SD EMV210/145: 24VAC - proportional;
- ▶ SD EMV210/146: 24VAC - 3 positions;
- ▶ SD EMV210/147: 230VAC - 3 positions.
- ▶ Maximum stroke: 5,5 mm;
- ▶ Manual operation by 3 mm hexagonal key;

Voltage	: 230VAC; 24VAC
Frequency	: 50/60 Hz
Manual operation	: 3mm hexagonal key
Cable length	: 1,5 m
Protection Class	: IP 40
Weight	: 350 Grms.
Actuating force	: 250N
Input impedance	: > 100 k Ohm (DC 0-10v)

ELECTRIC ACTUATORS DN40 ÷ DN50

- ▶ SD EMV210/148: 24VAC - proportional;
- ▶ SD EMV210/149: 24VAC - 3 positions;
- ▶ SD EMV210/150: 230VAC - 3 positions.
- ▶ Maximum stroke: 6,5 mm;
- ▶ Manual operation by adjusting handle;

Voltage	: 230VAC; 24VAC
Frequency	: 50/60 Hz
Manual operation	: adjusting handle
Cable length	: no cable
Protection Class	: IP 54
Weight	: 450 Grms.
Actuating force	: 400N
Input impedance	: > 100 k Ohm (DC 0-10v)

Pressure Independent Control Balancing Valve

TECHNICAL DATA:

SD-9777 range is available with two flow rates levels:

- ▶ "Low Flow": flow rate from 78 l/h up to 1722 l/h
- ▶ "High Flow": flow rate from 244 l/h up to 8586 l/h
- ▶ Working Pressure: PN25
- ▶ Working Temperature: from 0°C up to 120°C

SD-9777 is available in sizes from DN 15 up to DN 50 (up to DN 25 for "Low Flow" version only), with "CR - Corrosion Resistant" brass body.

SD-9777 series work properly within a differential pressure operating range between minimum values as specified in the below tables and a maximum value of 400 KPa.

INSTALLATION REMARKS:

- ▶ Before installation, make sure that required flow rate is within operating range of valve;
- ▶ Valve may be installed either in horizontal or vertical position with facing-up electric actuator;
- ▶ No minimum pipe length required either before or after the valve;
- ▶ Valve is supplied with a cap allowing (when screwed) the manual opening of the valve;
- ▶ After DPC cartridge removal and manual full opening of the valve, it is possible to flush the system branch where the valve is installed; when flushing process is over, reposition the DPC control cartridge.

BALANCING PROCESS:

- ▶ Totally open the valve by means of the presetting dial;
- ▶ Check the differential pressure, which shall be higher than the minimum value stated on relevant tables;
- ▶ Adjust the flow rate up to the required flow rate value. For each adjustment position, tables on the following pages show the relevant flow rate;
- ▶ Lock presetting dial position and assemble the electric actuator.

OPERATION PRINCIPLES:

REGULATIONS

The presetting dial device shows an index scale ranging from a minimum value of 0,5 up to a maximum value of 4. Each point of this scale is corresponding to one flow rate listed in the tables of following pages. The inlet water goes through a modulating control component whose geometry can be modified by turning the presetting dial.

CONTROL

Two different pressures operate on the DPC cartridge. The first one is transmitted through the passage connecting the valve inlet to the lower section of "p+" cartridge. The second one is registered at valve outlet by the flow rate selecting device "pa". In order to keep constant the difference between the mentioned pressures, the cartridge obturator operates by closing the water outlet bore to reach the pre set flow rate, regardless of fluctuating pressure conditions of the system.

MODULATION

The electrical actuator performs the modulating function changing the section of flow passage. When continuous modulation is carried out, the temperature is kept under control. SD-9777 keeps the same obturator stroke, regardless of the presetting dial position. With continuous modulation, control is excellent even with small flow opening. This eliminate on/off effect.

Pressure Independent Control Balancing Valve

SD-9776

Pressure Independent Control Valve is a multi-functional valve combining the operation of 3 different valves in one convenient and compact unit. The PICV act as a differential pressure control valve, a regulation valve and a 2-port control valve.

Technical Details:

Working Pressure	PN 25
Working Temperature	0°C ~ 120°C
Differential Pressure	4 Bar
High Flow	224 l/h up to 8586 l/h
Low Flow	78 l/h up to 1700 l/h

Pressure Independent Control Valve

Three Functions Type PN16

SD-9000 Series

FEATURES & BENEFIT:

- ▶ Three function in one: Electric Adjustment + Pressure Independence + Static Balancing.
- ▶ A linear flow control can be realized.
- ▶ Uses the straight travel plug disc, lower torque.
- ▶ Adjustable Kvs, maximum flow can be controlled.
- ▶ Large rang of differential pressure control and exact flow control precision.
- ▶ Actuator with multiple input and output signal selection, convenient for conversion.
- ▶ The actuator can automatic calibrate stroke, high precision signal feedback.
- ▶ Block protection prevents the ball from jamming when the valve is not moved for a longer period of inactivity.
- ▶ Safe mode: the actuator will be power off automatically once the actuator shell was opened.
- ▶ All the terminal connector were removable.

Applicable Standards

Flange Standard	EN 1092-2
Face to Face Standard	EN 558-1

Technical Details:

Working Pressure	PN16
Working Temperature	-5°~85°C
Suitable Medium	Water, Ethylene Glycol, etc.

Performance Parameters:

DN	Differential Pressure Range KPa	Minimum Flow m³/h	Maximum Flow m³/h	Valve Stroke Mm
65	30 ~ 400	3.5	16.0	15
80	30 ~ 400	4.0	27.0	15
100	30 ~ 400	9.0	41.0	15
125	30 ~ 400	15.0	50.0	30
150	30 ~ 400	20.0	80.0	30

Material Description

Body	Ductile Iron
Bonnet	Ductile Iron
Seat	Stainless Steel 304
Disc	Stainless Steel 304
Stem	Stainless Steel 304
Scale Bar	Brass
Adjusting Nut	Brass
Diaphragm	EPDM+ Stainless Steel 304
Spring	Stainless Steel 304

NOTE: Dimensions are in mm

Pressure Independent Control Valve

Three Functions Type PN16

ACTUATOR:

Technical Details:

Working electric voltage	AC24V
Power	4.2VA
Closing torque	850N
Maximum stroke	20mm
Input signal	0(2)~10V, 0(4)~20mA
Feedback signal	0~10V
Work temperature	0~50°C
Protection grade	IP54

Safe Model:

Knob (1) not inserted = manual mode

Knob (1) inserted = automatic mode

For safety reasons, the actuator automatically switches to manual mode when the cover is removed. To allow the commissioning technician to test functionality, the actuator can be switched to automatic mode using the included solenoid switch.

Remove the actuator cover and then insert the knob (1) into the PCB (2).

FUNCTION SWITCH:

The valve block protection switch: to prevent the valve be blocked after a longer period of inactivity.

Technical Specification

Body	Ductile Iron
Bonnet	Ductile Iron
Seat	Stainless Steel 304
Disc	Stainless Steel 304
Stem	Stainless Steel 304
Scale Bar	Brass
Adjusting Nut	Brass
Diaphragm	EPDM + Stainless Steel 304
Spring	Stainless Steel 304

STROKE INDICATOR:

STROKE INDICATOR:

Electric actuator have manual function and automatic function. When manual mode is activated, the extended slide indicator allows this status to be recognized even in poorly lit areas. Now the actuator can be set to the desired valve position on the hand-wheel. After manual mode is switched off, the actuator resumes automatic positioning.

Bronze Globe Valve

Metal to Metal Seating

SD-GV20

The SD-GV20 Globe Valve is manufactured in BS5154. An economical bronze globe valve with a PTFE valve disc and a non-return design, preventing reverse flow when in the open position. Suitable for isolation duty providing a leak tight shut-off.

Technical Details:

Working Pressure	PN20
Working Temperature	-10°C ~ 170°C
Thread	BS21 (B.S.P.T.)

Specifications:

No.	Part	Material
1	Hand-wheel Nut	Stainless Steel

Bronze Swing Check Valve

SD-GCV20/W

The SD-GCV20/W valve is manufactured in accordance with BS 5154 PN20 which can be used for heating, cooling, sanitary, pneumatic systems, waterworks, autoclaves, pumps. It is suitable for installation either in vertical or horizontal pipelines to allow unidirectional flow.

Technical Details:

Working Pressure	PN20
Working Temperature	-10°C ~ 80°C
Thread	BS 21 (B.S.P.T.)

Specifications:

Spring Loaded Non-Return Valve

SD-930

The SD-930 valve is manufactured in accordance with BS 5154/B - PN20 and EN ISO 9001 which can be used for heating, sanitary, pneumatic systems, waterworks, autoclaves & pumps. It is suitable for installation either in vertical or horizontal pipelines to allow in one direction.

Technical Details:

Working Pressure	PN20
Working Temperature	-20°C ~ 110°C

Dual Door Wafer Check Valve

SD-16CV-W

The SD-16CV-W Check valve is manufactured to BS EN 12334. Dual Door Check valve is a compact body usually a wafer design. It has a hinge pin which two opposing D-shaped disc rotate and torsion spring wraps down the hinge pin. Suitable for mounting in both horizontal and vertical pipeline.

Technical Details:

Working Pressure	PN16
Working Temperature	-20°C ~ 120° C
Mounting Flange	BS EN 1092-2

Specifications:

No.	Part	Material
1	Body	Ductile Iron
2	Disc	Stainless Steel 304

Bronze Strainer

SD-GYS20/W

The SD-GYS20/W strainer is manufactured in accordance with BS 5154 PN20 and can be used for filtering heating, sanitary, pneumatic systems, water works and saturated steam.

SHIELD Y-pattern strainers are used to filter foreign matter (contaminations/solids) which represents in every pipeline and can build up to cause blockage. It protects the pump suction inlets and pipeline equipment against faulty operation, thus preventing costly shutdown and protecting expensive pipeline equipment from being damaged.

Technical Details:

Pressure Reducing Valve

SD-91430K

KITEMARK Approved

The pressure reducing valves series SD-91430 are suitable for reduction and control of pressure in plants. It can be installed in both vertical and horizontal direction.

Technical Details:

Working Pressure	PN25
Working Temperature	0°C ~ 80°C, 0°C ~ 130°C*
Max inlet pressure	25 bar
Field of action (outlet pressure)	1 - 5, 5 bar
PS value set during test	3 bar
Outlet PS Tolerance	± 10%
Max temperature of use	0°C (excluding ice), 130°C*
Thread	ISO 228/1
Gauge of connection	BS EN 10226- Rp1/4" (ex ISO 7/1)
Suitable fluids	Water, Glycolate Solutions (glycol 50%), Compressed Air (no oil mist)
Test	Kitemark approved in compliance with the limits defined by EN 15671

* Only for sizes 3" & 4".

Specifications:

No.	Part	Material
1	Body	Nickel Plated Brass alloy
2	Inner Parts	Brass alloy
3	Seat	Stainless Steel
4	'O' rings	NBR 70 SH VITON 70 SH*
5	Thread	ISO 228

* SD-91430-K Body Material Brass alloy is also available upon request.

Bronze Pressure Reducing Valve

SD-PRV20/W:

The pressure reducing valves series SD-PRV20/W is designed to provide a constant outlet pressure despite varying inlet pressure.

- The outlet pressure is adjustable between 1 to 4 bar.
- The inlet pressure must be higher than the designed pressure.
- This direct acting PRV can be installed in horizontal and vertical direction.

Technical Details:

Working Pressure	PN20
Working Temperature	0°C ~ 70°C
Thread	BS 21 (B.S.P.T.)

Bronze Pressure Reducing Valve

SD-PRV20/W

The pressure reducing valves series SD-PRV20/W is designed to provide a constant outlet pressure despite varying inlet pressure.

- The outlet pressure is adjustable between 1 to 5 bar.
- The inlet pressure must be higher than the designed pressure.
- This direct acting PRV can be installed in horizontal and vertical direction.

Brass Automatic Air Vent

SD-BAV16

The SD-BAV16 valve is used for heating, sanitary, pneumatic systems & waterworks. Suitable for installation in horizontal pipelines.

The evacuation of a consistent air flow is through a pipeline (e.g. during loading/pressurization of the plant) and degassing which discharges air trapped or formed in the pipeline while functioning.

This valve has a paramount importance in climatisation networks and systems, evacuating and discharging trapped air in water pipes for service under pressure. Further, it reduced space requirements which make the valve ideal use inside a modern heat generators where air must be evacuated from the circulation pumps in order to prevent unwanted cavitation phenomena.

Water Hammer Arrestors

Copper Body Piston Type

SD-9WHA-KW-B

DESCRIPTION:

Water Hammer arrestors can be installed between the water pipe to machine, to absorb the shock and stop the banging.

SPECIFICATIONS:

SHIELD Products Pre-charged hard drawn copper surge pressure absorber with teflon piston, EPDM 'O'ring seals, and Lead Free Adaptor male NPT & BSP connection.

OPERATING PRESSURE:

Designed to operate on all domestic and commercial lines up-to 150 PSI Working Pressure.

TEMPERATURE RANGE:

33°F ~ 180°F (0.5°C ~ 82°C)

INSTALLATION:

May be installed in new or existing plumbing systems with a standard pipe tee.

CONSTRUCTION:

Bodies: Hard drawn copper with custom internal mirror finish.
Seal Lubricant: Dow-Corning Silicone compound
Piston: Teflon
Seals: EPDM 'O' rings

Metal Bellows Expansion Joint

Rotary Flanged, with/without Liner, PN16

SD-918 Series

DESCRIPTION:

Axial expansion joints aim to absorb the axial expansions.

- ▶ They do not change the direction of the flow.
- ▶ Additional assemblage distance is not necessary.
- ▶ Dividing the pipeline helps to prevent stress of lateral forces.

MOVEMENT ABSORPTION:

Axial shift and slight all-around movement of the expansion joint is possible. Axial expansion joints with two bellows are used to absorb larger movements.

ADVANTAGES OF AXIAL EXPANSION JOINTS:

- ▶ Easy to absorb the expansion movements
- ▶ No direction changes of the flow
- ▶ Minimum application area
- ▶ Possible lateral and angular expansion absorption by the additional bellows.
- ▶ To provide a non-stressed area where the pressure is not too high such as pump and compressor applications.
- ▶ Low application costs

Working simulation of axial expansion joint

Technical Details:

Bellow Material	Stainless Steel AISI 321 (opt.304,316L,316Ti,309)
Connection Types	Fixed and Floating Flanged and Welded Ended
Flange Material	Carbon Steel St.37.2 as standard, the material can be customised on request
Inner Sleeve	Available in stainless steel AISI 321 (opt.304,316L,316Ti,309) on request
Working Temperature	-80°C ~ 600°C
Working Pressure	PN2.5, PN6, PN16, PN25, PN40, PN64
Nominal Diameters	DN 25 (1") ~ DN 2600 (104")

NOTE: Other flange types made according to different standards (ANSI, BS, UNI) are also available.

APPLICATION OF FIXED POINTS:

By using axial expansion joints in pipeline applications, it will be possible to build up well structured and freely moving straight pipelines. Axial expansion absorption can only be possible with applying appropriate guides which are strong enough to meet the pressure at both ends.

APPLICATION OF FIXED POINTS:

By using axial expansion joints in pipeline applications, it will be possible to build up well structured and freely moving straight pipelines. Axial expansion absorption can only be possible with applying appropriate guides which are strong enough to meet the pressure at both ends.

Valves Installation Instructions

Installation Instructions

GENERAL

We assure the satisfactory performance of our valve. However proper storage, neat installation, gentle operation & timely maintenance enhance valve performance and life. Upon receipt, inspect the valve for any shipping damage, verify the goods received and check for short supply if any.

STORAGE AND PRESERVATION

Valve is generally packed and protected from damage during shipment. This packing & protection should be left in place until the valve is to be installed. Valves should, where possible be stored in a clean, dry environment. Caution: - avoid the entry of dirt, sedimentation grit & other foreign particles on seating & sealing surface, flange face or thread surface.

VALVE MARKING

Each valve has the identification information plate riveted/fastened on the flange/to the side of the valve body. Flow direction is marked on the valve body.

GENERAL INSTRUCTION FOR INSTALLATION

Wear all necessary personal protective equipment. Never remove or maintain a valve or joint unless the line had been fully drained or de-pressurized always operate the valve to the open position to ensure that no trapped pressure exists within the cavity. Never handle the valves that have been used on harmful substances unless they have been completely decontaminated and & certified safe to handle. Always use correct lifting methods & equipments when installing, removing & maintaining the product.

Valve can be installed in any position. However avoid stem position downward. It is recommended to mount the valve stem in vertical position prior to installation; pipe lines should be thoroughly flushed, cleaned free from weld slugs, rust, scales & other dust inside piping & on flange surface.

Pipe line should be aligned properly so that pipeline weight & stresses are not transferred to the valve. Valves should be thoroughly cleaned at flow passage, stem portion before installation. If the valves are stored for long time, they must be cleaned, lubricated, & tested prior to installation. Tighten the gland packing uniformly before installing & after trial operation.

Qualified welder must perform welding operation & the welding procedure in accordance with ASME boiler & pressure vessel code.

Site standards for installation of the valves must be followed where such standards do not exist; the following guidelines must be used.

FLANGED END VALVES

Pipe work should have correct gap to allow the valve face to face length plus assembled gasket material thickness. Be sure that flange gasket & fasteners are suitable for operating condition. Insert the valve along with gasket between mating flange, align the flange bolt holes & hold it in place, hold the nut first, insert bolt & finger tight first. Use two spanners to tighten the joint in sequence.

PERIODIC INSPECTION AND MAINTENANCE

Annual inspection should be made to check up valve body, disc, and stem if worn or pitted, substitute new one. It is recommended to replace seat, body gasket, stem packing, washers, unless the parts are in good condition.

BONNET JOINT

Bonnet gasket is properly tightened in the factory to avoid any joint leakage. However before applying pressure, ensure that all bolts are properly tightened. If leaking, depressurize then uniformly tighten the stud/nut.

GLAND PACKING

Gland packing is provided to avoid leakage through the stem. When leakage is detected from the gland area while the valve is being in service, the gland should immediately re-tighten. Tighten the gland slowly and gradually until the leakage stops. While rotating the valve hand wheel do not over tighten the packing.
